

MICROBLADING TECHNIQUE

Microblading is a semi-permanent tattoo technique of drawing of eyebrows with hyper-realistic results. It is done with a hand tool placing natural looking hair strokes one at a time.

The shape of eyebrow is calculated only according to the morphology of the face.

The color is determined according to the natural color of the hair and the hairs of the eyebrows.

Refreshing of the color is done once in 6 months to a year and a half, depending on skin quality.

Symmetry is determined digitally when the facial muscles are relaxed. Using a unique measuring system, results complement the natural shape of the brows.

The entire procedure takes 2.5-3 hours. This includes Shaping (30-40 minutes), application of topical anesthetic (40 minutes), and microblading and perfecting (1-1.5 hours).

This procedure is customized to your own facial features. It is done with careful precision for beautiful results.

After the procedure:

Day1-5: An aftercare kit as well as written instructions are sent home with clients.

2-3 weeks after the treatment avoid applying of powder, makeup, cream with active ingredients over the eyebrows, bathing in public water, strong exercise with profuse sweating, sauna, tanning beds, etc.

30 days after the procedure clients must come back for a complimentary perfecting session. This session is around 1.5 hours to enhance, darken, or replace any lines that may have faded during the healing process.

There is no same day appointment available for this service. Each client must go through a thorough consultation and a 24-hour patch test before this service.
